
Data Security

Safe processing of the data is one of the everyday responsibilities of most of the university staff and faculty members.

We strongly recommend to keep in mind the basic **principles of data security** both during the preparation of data management plan and during the run of the project itself:

- [Categorization of data](#)
- [Categorization of storage](#)
- [Recommendations for the selection data storage](#)
- [Methods of data transfer](#)
- [Fundamentals of cyber-security](#)

Data can be published in repositories or data journals.

These web pages were created in cooperation with [Computer Science Centre](#) and [Data Protection Officer](#) and was updated on 2020-09-22.
